RM-9242

To whom it may concern,

You should rethink your regulations of 50,000 stations. Shouldn't the limit be 10,000 watts or less. The lower power will give individuals who don't have the resources, access to the airwaves.

The biggest problem is content. Most of the FM stations are music oriented. Very little are news focus. And, most of these stations ignore the issues that affect many oppressed communities. Finally, each station seems to mirror each other format - very little DJ creativity. A

Regarding low power stations, can you reinstitute new regulations for 10 to 50 watts stations for individuals. Thank you for your consideration to my concerns.

Sincerely,
Chris J. Brunson

Subject: micro-broadcasting

DM-9242

I would like to put forth my opinion on the above issue. Back in the 60 the people who ran CB radios were people who policed thereselves and Lord help anyone who used nothing but the proper form an followd the rules on the CB. I know many times I have sit in a auto with a DF antenna trying to find someone who was cussing or dead keying or just not being a good CB'R. He was either turned into the FCC or found his unit wouldn't work because of pins in his coax. It is almost impossible to find and will cause problems with there radios. I think the Micro-Broadcasting should be allowed and should be made legal. I think it would be policed by the users and the stations to a degree that the FCC wouldn't have to put on more people. I just honestly can't see what the problem is! That type of station could be a great benfit to small communities that have been ignored by the large stations. So lets approve the thing and get on with the business at hand..
